# Bridge Business Central with your Windows desktop.

duveka BC Helper is the small but powerful desktop companion that connects Microsoft Dynamics 365 Business Central with your local PC, your Outlook, your printers and your folders.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

# Bridge Business Central with your Windows desktop.

duveka BC Helper is the small but powerful desktop companion that connects Microsoft Dynamics 365 Business Central with your local PC, your Outlook, your printers and your folders.

---

## Send emails directly from Business Central using Outlook.

Outlook is still where most professionals manage their email, attachments and signatures. duveka BC Helper lets Business Central hand off email composition straight to Outlook on the user's desktop, with the right document already attached. No copy paste, no switching contexts, just one click and the mail is in the draft folder ready to send.

## Documents and files where they actually need to be.

Reports, invoices and exports often need to land on a specific folder, network share or scanner inbox. duveka BC Helper downloads documents from Business Central straight to local PC folders, organised the way you need them. Going the other way, scanned receipts, photos or contracts can be uploaded into Business Central records with a few clicks.

## Lightweight, secure and quietly out of the way.

duveka BC Helper runs in the system tray. Minimal resource use, secure port based communication and no admin headaches. It is a small piece of software that quietly removes a lot of friction from the daily Business Central experience.

---

## Where the helper earns its keep.

duveka BC Helper is for the people who use Business Central all day every day. The features are not flashy, they just save time on every task.

- o Outlook integration for sending documents from BC
- o Local download of reports, invoices and exports
- o Upload of local files into BC records
- o System tray application with minimal footprint
- o Secure communication tailored to your BC setup

## Who installs duveka BC Helper.

Office staff, sales teams, accountants and project managers who live inside Business Central. Companies that have moved to Business Central cloud or SaaS but still rely on local Outlook, network drives and document workflows. The helper closes the gap between cloud ERP and the desktop.
