

DUVEKA.MODULE

Acceptance specifications for the timber and lumber industry.

duveka Blanket Quantity Journal extends Microsoft Dynamics 365 Business Central with precise acceptance specifications for timber purchases. Length, width, thickness, properties and quality grades, all in one structured tool.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Acceptance specifications for the timber and lumber industry.

duveka Blanket Quantity Journal extends Microsoft Dynamics 365 Business Central with precise acceptance specifications for timber purchases. Length, width, thickness, properties and quality grades, all in one structured tool.

Acceptance specifications, not approximations.

When you buy timber by the truckload, you do not just buy a quantity. You buy a tolerance window: minimum and maximum length, width, thickness, with property and quality constraints. duveka Blanket Quantity Journal lets you define exactly that. Every blanket purchase quantity carries its own acceptance specification, and incoming material is checked against that specification automatically.

Tightly integrated with duveka Timber.

The module sits on top of duveka Timber and the duveka Core. It links your blanket specifications to actual measurements, parcels, packs and quality grades. The receiving team sees what is allowed, what is borderline and what should be refused, all without leaving Business Central.

Requisition worksheet support and full document lifecycle.

Blanket quantities live across the entire document lifecycle, from initial planning through requisition worksheets to receipt and invoicing. duveka Blanket Quantity Journal keeps the link between specification, planned demand and actual receipt clean, so analysts and buyers always see how reality compares to plan.

What duveka Blanket Quantity Journal adds.

duveka Blanket Quantity Journal is a focused module for serious timber operations. Its job is to bring acceptance specification logic into Business Central.

- o Acceptance ranges for length, width and thickness
- o Property and quality grade definition per blanket quantity
- o Automatic linkage to duveka Timber measurements and packs
- o Support across the requisition and document lifecycle
- o Tips and best practices included with the module

Who it is built for.

Sawmills and timber traders that already use duveka Timber and want to formalise the way they buy. Operations that ship in mixed quality timber and need a clear, agreed specification with their suppliers. Quality teams that want acceptance criteria documented inside the ERP rather than on a paper note.

power on your business.
