# Direct printing without a print dialog.

duveka Direct Print sends Business Central output to the right printer, in the right format, without any user interaction. Perfect for label printers, picking lists and high volume operations.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

# Direct printing without a print dialog.

duveka Direct Print sends Business Central output to the right printer, in the right format, without any user interaction. Perfect for label printers, picking lists and high volume operations.

---

## No dialog, no detour.

Standard Business Central printing assumes someone is sitting at a desk with a print dialog. Warehouses, production lines and self service kiosks do not work that way. duveka Direct Print routes documents to a configured printer based on rules, so picking lists hit the warehouse printer, labels hit the label printer and invoices hit the office printer without anyone touching a button.

## Built for label printers and operational environments.

Label printers in particular benefit from direct printing. The right ZPL goes to the right Zebra, the right shipping label hits the right printer at the right station. duveka Direct Print pairs naturally with duveka Zebra to drive a printing pipeline that fits the operational pace of your warehouse.

## Reliable, configurable and centrally managed.

Each Business Central document type can route to a different printer based on user, location or document content. The configuration is central, so introducing a new printer or moving printers between stations is administration, not development.

---

## Why direct printing matters.

duveka Direct Print is small, focused and removes a real source of friction from operational printing.

- o Document routing without user interaction
- o Rule based selection of printer per document type
- o Native pairing with duveka Zebra for ZPL output
- o Central configuration of printers and routing
- o Designed for warehouse, production and high volume environments

## Who uses duveka Direct Print.

Warehouses with multiple printer stations. Production lines that print labels per work order. Companies running self service kiosks or unattended printing for shipments. duveka Direct Print turns the printer farm into something the ERP can actually rely on.
