

DUVEKA.MODULE

Configurator data straight into Business Central.

duveka EV Trade automates the import of XML based product configurations from window and door manufacturers like JeldWen, Grauthoff, Garant and Additio Plus into Microsoft Dynamics 365 Business Central, all the way through to the matching purchase order.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Configurator data straight into Business Central.

duveka EV Trade automates the import of XML based product configurations from window and door manufacturers like JeldWen, Grauthoff, Garant and Additio Plus into Microsoft Dynamics 365 Business Central, all the way through to the matching purchase order.

From configurator to sales order without retyping.

Trading specialised manufactured goods means pasting configurator output, typing dimensions and double checking codes. duveka EV Trade reads complex XML files from manufacturer configurators and turns them into Business Central sales orders directly. Bill of material structures, options and item descriptions land in your system the way the manufacturer sent them.

One click purchase orders that match the sale.

After the sales order is in, the system creates the linked vendor purchase order on demand. Items are routed via intelligent description and design mapping, position hierarchies stay intact, and the link between the sale and the purchase remains traceable. No more manual matching in spreadsheets.

Built for the trade between configurator and ERP.

duveka EV Trade is targeted at trading companies that resell highly configurable products from manufacturers with mature digital configurators. The supported interfaces include JeldWen, Grauthoff GTI, Garant and Additio Plus, with room for further integrations as the market evolves.

What duveka EV Trade automates.

duveka EV Trade is a focused interface module. It does one thing very well: turning XML configurator output into clean ERP transactions.

- o Automated XML import from major configurator systems
- o One click vendor purchase order generation
- o Intelligent item mapping by description and design
- o Preserved position hierarchy and bill of material structure
- o Reduced rekeying and a tight link between sale and purchase

Who runs duveka EV Trade.

Window and door specialists, kitchen showrooms and other configurable goods traders that exchange XML data with their suppliers. If your team is currently keying configuration data into Business Central by hand, duveka EV Trade is the obvious upgrade.

power on your business.
