

DUVEKA.MODULE

Native FTP, FTPS and SFTP connectivity for Business Central.

duveka FTP Client adds proper file transfer to Microsoft Dynamics 365 Business Central. No middleware, no PowerShell scripts, no third party tools. Upload, download and integrate, directly from BC.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Native FTP, FTPS and SFTP connectivity for Business Central.

duveka FTP Client adds proper file transfer to Microsoft Dynamics 365 Business Central. No middleware, no PowerShell scripts, no third party tools. Upload, download and integrate, directly from BC.

File transfer that belongs in your ERP.

Many Business Central integrations still depend on someone manually moving files between servers. duveka FTP Client brings that workflow inside the ERP. Files can be uploaded to external servers, downloaded into BC and remote directories listed, all from configurable connection profiles managed centrally.

Secure SFTP for the integrations that matter.

Modern partners and authorities expect SFTP with proper key based authentication, not FTP over an open port. duveka FTP Client supports SFTP via SSH alongside classic FTP and FTPS, so the same module covers everything from a legacy supplier to a modern logistics provider.

Reusable across processes and extensions.

Each FTP setting is a reusable connection profile. Once configured, it can be triggered from pages, batch jobs or custom AL code. The same connection covers automated EDI uploads, scheduled exports of postings and ad hoc downloads of statements, with no duplicate setup.

What you can stop building yourself.

Most companies have at least one custom Powershell or scheduler hack to move files. duveka FTP Client replaces all of them with one supported, native module.

- o Native FTP, FTPS and SFTP support
- o Secure key based authentication
- o Centrally managed connection profiles
- o Triggerable from pages, jobs and custom AL code
- o Foundation for EDI, logistics and scheduled file exchanges

Where it earns its place fast.

Companies running EDI exchanges with suppliers and customers. Logistics providers that drop manifests on partner servers. Finance teams that send postings to external bookkeeping systems. Anywhere a file needs to leave or arrive at Business Central reliably, duveka FTP Client takes the pain out of the integration.

power on your business.
