# Microsoft Graph and Excel, properly integrated with Business Central.

duveka Graph API connects Microsoft Dynamics 365 Business Central to Excel files in Microsoft SharePoint Online and OneDrive via Microsoft Graph, with the security and performance enterprise scenarios demand.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

# Microsoft Graph and Excel, properly integrated with Business Central.

duveka Graph API connects Microsoft Dynamics 365 Business Central to Excel files in Microsoft SharePoint Online and OneDrive via Microsoft Graph, with the security and performance enterprise scenarios demand.

---

## Work with Excel in the cloud, not on a desktop.

Many Business Central scenarios still depend on Excel as the calculation or reporting layer. The Graph Connector lets your AL code read and write Excel files in SharePoint Online and OneDrive directly, without anyone opening the file on a desktop. Pricing models, financial reports, configuration sheets and master data templates can all live in modern cloud storage and still drive the ERP.

## Unified API across local and cloud Excel.

duveka Graph API is part of the duveka Microsoft Excel Interface Framework. The same API surface covers local Excel files and Excel files in SharePoint or OneDrive, so your developers do not branch their code by storage location. Switching from a local prototype to a SharePoint deployment is a configuration change, not a rewrite.

## Enterprise security and high performance.

The connector uses Azure App Registration with the right Microsoft Graph permissions, integrates with Microsoft 365 security and is optimised for large data volumes. It is intended for production use in real organisations, not for one off scripts on a developer's laptop.

---

## Why duveka Graph API exists.

Excel is not going away. duveka Graph API turns Excel files in SharePoint and OneDrive into first class ERP citizens.

- o Native integration with Microsoft Graph and Excel files
- o Unified API across local and cloud storage
- o Designed for SharePoint Online and OneDrive
- o Azure App Registration based authentication
- o Optimised for large datasets and enterprise security

## Where it makes sense.

Companies that have moved to Business Central SaaS but still depend on Excel for calculations, reports or master data. Partners building duveka Price Calculation or Excel Output scenarios for cloud customers. Any organisation that wants Excel to live in SharePoint without losing its connection to the ERP.
