Project management for Business Central, properly extended.

duveka Job Advanced adds the project management depth that real project businesses need to Microsoft Dynamics 365 Business Central. Multi level structures, milestones, advanced billing and clean reporting on top of the standard jobs.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Project management for Business Central, properly extended.

duveka Job Advanced adds the project management depth that real project businesses need to Microsoft Dynamics 365 Business Central. Multi level structures, milestones, advanced billing and clean reporting on top of the standard jobs.

Multi level project structures, the way you actually plan.

Standard Business Central jobs are flat. Real projects have phases, work packages, deliverables and tasks. duveka Job Advanced introduces the multi level structure your team already uses on the whiteboard, with budgets, hours and costs that roll up correctly to every level.

Milestones and advanced billing.

Project businesses bill on milestones, on percent complete, on time and material or on a mix. duveka Job Advanced supports these scenarios out of the box. Milestones drive billing events, percent complete is calculated against the right structure, and the resulting invoice reflects what was actually delivered, not just what was planned.

Reporting that controls the project, not the other way around.

Project controllers need real time visibility on cost, revenue and progress at every level of the structure. duveka Job Advanced provides the reporting hooks for that view. Margin per phase, hours per resource, deviation from budget, all visible without rebuilding the report every month.

What duveka Job Advanced adds.

duveka Job Advanced takes the standard Business Central jobs and turns them into something a serious project business can run on.

- o Multi level project and phase structure
- o Milestone and percent complete billing
- o Time and material flexibility per phase
- o Roll up reporting at every structural level
- o Designed for project services and engineering businesses

Who runs duveka Job Advanced.

Engineering offices, IT services and consultancies that bill projects rather than products. Industrial project businesses with long running, multi phase contracts. Companies that have outgrown the standard jobs module but do not want a separate project system. duveka Job Advanced keeps the project work inside Business Central where the finance side already lives.

power on your business.
