

DUVEKA.MODULE

Tour planning that knows your goods, your trucks and your customers.

duveka Tour brings end to end tour planning to Microsoft Dynamics 365 Business Central. Plan, execute and document delivery and collection routes with full integration into sales, purchase and warehouse data.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Tour planning that knows your goods, your trucks and your customers.

duveka Tour brings end to end tour planning to Microsoft Dynamics 365 Business Central. Plan, execute and document delivery and collection routes with full integration into sales, purchase and warehouse data.

Items, packages and orders assigned to real tours.

Tour planning lives or dies on what is actually on the truck. duveka Tour assigns packing goods, packages, containers and order lines to specific tours, so the planner sees the real load and the driver sees the real route. Inventory moves automatically between dedicated Tour and Shipped locations, and every step is reflected back in Business Central.

Status visibility from planning to closure.

A tour goes through stages, planned, in progress, completed, invoiced. duveka Tour tracks each transition cleanly. Your dispatcher sees what is open, what is on the way back and what is already costed, all from the duveka Tour Calendar. Daily resource planning, vehicle utilisation and cost monitoring run on real data instead of memory.

Tightly integrated with sales, purchase and projects.

Tours are not islands. duveka Tour integrates with sales orders, purchase orders, warehouse shipments and project costing. The tour cost lands on the right job, the right customer and the right finance posting. Logistics finally becomes a billable activity inside the ERP, not a side calculation in spreadsheets.

Why tour planning belongs in Business Central.

Most logistics teams plan tours in a separate tool and rebook results into the ERP afterwards. duveka Tour eliminates that detour.

- o Items, packages, containers and order lines assigned per tour
- o Automatic inventory movement between Tour and Shipped locations
- o Status tracking from plan to closure
- o Tour calendar with vehicle and resource view
- o Direct cost integration with sales, purchase and project ledgers

Industries that depend on it.

Timber traders, building material distributors and packaging logistics providers. Companies running their own delivery fleet. Operators of reusable packaging pools where tours cover both delivery and collection. duveka Tour was built around these scenarios and stays close to how they actually work.

power on your business.
