

DUVEKA.MODULE

Mobile data capture for warehouse and shopfloor, made for Business Central.

duveka MDE puts Microsoft Dynamics 365 Business Central into the hands of your warehouse and production teams. Goods receipts, issues, stocktakes, pallet handling and image capture work directly on the device.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Mobile data capture for warehouse and shopfloor, made for Business Central.

duveka MDE puts Microsoft Dynamics 365 Business Central into the hands of your warehouse and production teams. Goods receipts, issues, stocktakes, pallet handling and image capture work directly on the device.

Operational tasks where they actually happen.

Asking warehouse staff to type into a desktop client is a recipe for delay and error. duveka MDE moves the relevant Business Central tasks onto a mobile device with an interface designed for the floor. Goods receipts and issues are confirmed at the moment they happen, stocktakes are running counts instead of after the fact reconciliations, and palletisation is documented with one tap.

Built around timber, packaging and pallet workflows.

duveka MDE plays especially well in timber, packaging and pallet driven warehouses. Wooden pallets are first class objects, packing confirmations and package linkage feed straight into the duveka Packaging and duveka Tour modules, and traceability is part of every transaction. The result is one mobile flow across your entire duveka stack.

Photos and traceability for the audit trail.

Modern operations need photographic evidence as well as numbers. duveka MDE supports image capture for documentation directly on the device. Combined with duveka DMS, every photo is filed against the right record, so claims, audits and customer questions can be answered with the original picture from the warehouse floor.

What duveka MDE replaces.

Most warehouses still rely on printed lists, manual data entry and the night shift retyping numbers into the ERP. duveka MDE replaces that with mobile, real time data capture.

- o Goods receipt and issue at the moment they happen
- o Mobile stocktake and pallet handling
- o Packing confirmations and package linkage
- o Image capture for documentation and traceability
- o Native fit with duveka Packaging, Tour and DMS

Where it makes a daily difference.

Timber and packaging warehouses with high transaction volumes. Production sites that confirm finished pallets in real time. Logistics operations where photo documentation matters for claims. duveka MDE turns Business Central into the system the warehouse uses, not the system the warehouse fights.

power on your business.
