# PPWR compliance, built for Business Central from day one.

duveka PPWR helps producers, fillers and importers meet the new EU Packaging and Packaging Waste Regulation directly inside Microsoft Dynamics 365 Business Central. Six compliance check modules, traffic light status, immutable logs and ready to issue Declarations of Conformity.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

# PPWR compliance, built for Business Central from day one.

duveka PPWR helps producers, fillers and importers meet the new EU Packaging and Packaging Waste Regulation directly inside Microsoft Dynamics 365 Business Central. Six compliance check modules, traffic light status, immutable logs and ready to issue Declarations of Conformity.

---

## Six compliance checks, one consistent status.

PPWR is not a single rule, it is a stack of design, content, recyclability and labelling requirements that all need to be true at the same time. duveka PPWR runs six dedicated check modules against your packaging types and rolls the result into one clear traffic light status. Grey, red, yellow, green, with a log entry for every check that ran.

## Declaration of Conformity only when the data says so.

A Declaration of Conformity is a legal statement, not a marketing artefact. duveka PPWR only allows the DoC to be issued when the underlying compliance results actually justify it. When a packaging type changes version, the verification cycle resets automatically, so a stale check from six months ago can never end up signing off a new design.

## Immutable logs and proper item linkage.

Auditors want to see what was checked, when, by whom and against which version. duveka PPWR writes an immutable compliance log for every relevant action. Business Central items and item variants are linked cleanly to packaging types, so the chain from the warehouse part to the regulatory paperwork is unbroken.

---

## Why PPWR demands a real solution.

Excel based PPWR tracking will not survive the first audit. duveka PPWR brings the rigour the regulation expects directly into your ERP.

- o Six specialised compliance check modules
- o Traffic light status from grey to green
- o Conditional Declaration of Conformity creation
- o Automatic reset on packaging version change
- o Immutable compliance log and full audit trail

## Who needs duveka PPWR.

Producers and importers placing packaging on the EU market. Filler companies that ship goods in branded packaging. Trading companies whose suppliers expect documented compliance. Anyone within scope of Regulation EU 2025/40 who wants the regulatory work to live in their ERP rather than in a fragile spreadsheet.
