

DUVEKA.MODULE

Sell and buy in the units that match your business.

duveka Price Unit lets Microsoft Dynamics 365 Business Central handle prices in alternative units of measure, like pallets, cartons, packs of 100 or kilograms, while keeping the calculation behind the scenes correct.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Sell and buy in the units that match your business.

duveka Price Unit lets Microsoft Dynamics 365 Business Central handle prices in alternative units of measure, like pallets, cartons, packs of 100 or kilograms, while keeping the calculation behind the scenes correct.

Price units alongside base units, automatically converted.

A pallet is rarely the same as a piece, but customers and suppliers love quoting in pallets. duveka Price Unit allows each item to define a price unit and a price factor that connects it to the base unit. The system handles the conversion in purchase orders, sales documents, price lists and item cards, so prices stay consistent regardless of which unit appears on the document.

Consistent pricing across the entire process.

duveka Price Unit ensures that the same logic applies everywhere prices are touched. Purchase orders, invoices, sales quotes, sales orders and price lists all use the same conversion. VAT calculations stay correct because the integration sits inside Business Central's standard pricing engine, not as a workaround on top of it.

Examples your team will recognise immediately.

PAL with a price factor of 60 means one pallet equals 60 pieces. KAR with a price factor of 12 means one carton equals 12 pieces. 100Stk represents packs of 100. KG covers items sold by weight. Whatever your industry calls them, duveka Price Unit lets the team document and trade in the units that customers and suppliers actually use.

Why duveka Price Unit beats workarounds.

Many companies handle alternative units with Excel side calculations or comment fields. duveka Price Unit replaces these with a clean, integrated solution.

- o Alternative units for purchase, sales and price lists
- o Automatic conversion via configurable price factors
- o Consistent pricing across orders, invoices and quotes
- o Correct VAT calculation through standard pricing engine
- o Examples for pallets, cartons, packs of 100 and weight units

Where it pays off.

Distributors that buy by container and sell by carton. Manufacturers shipping pallets to retailers and pieces to specialists. Trading companies that mix weight and quantity based pricing. duveka Price Unit makes all of these scenarios part of the standard workflow instead of a daily exception.

power on your business.
