

DUVEKA.MODULE

A pricing engine that thinks beyond price lists.

duveka Price Calculation introduces a flexible, schema based pricing engine to Microsoft Dynamics 365 Business Central. Define custom logic, connect to Excel data models and execute multi step calculations directly from the sales process.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

A pricing engine that thinks beyond price lists.

duveka Price Calculation introduces a flexible, schema based pricing engine to Microsoft Dynamics 365 Business Central. Define custom logic, connect to Excel data models and execute multi step calculations directly from the sales process.

Price calculation schemas instead of fixed formulas.

Standard Business Central pricing assumes lists and discounts. Real businesses calculate based on dimensions, materials, configuration options, time slabs and customer specific rules. duveka Price Calculation lets each item link to a price calculation schema. The schema describes how the price is built, step by step, with formulas, lookups and references to other data.

Excel as a calculation backend, not just a report.

Many companies already have a refined Excel model that produces the right price. duveka Price Calculation can call into Excel templates, read input cells, write inputs and read outputs, all from within the sales process. Your Excel model stays where the experts maintain it, the ERP just consumes the result.

Multi step calculations, transparent results.

When a price comes from a sequence of steps, you want to see those steps. duveka Price Calculation executes the schema in order, returns the final price and cost to the sales line and keeps the trace of how the number was built. Sales sees the right price, controlling sees the right margin, and key users can adjust the schema instead of begging a developer for changes.

Why classic price lists fall short.

Price lists work for stocked, standard products. They break for configured, customised or complex calculation scenarios. duveka Price Calculation closes that gap.

- o Schema based price calculation per item
- o Mathematical formulas, item and customer fields, loops and tables
- o Read and write integration with Excel templates
- o Final price and cost applied automatically to sales lines
- o Maintainable by key users, not just developers

Where it transforms quoting.

Custom packaging companies that quote by dimensions and materials. Manufacturers with configuration heavy products. Trading companies that build prices from raw material indices and surcharges. Anywhere where the answer to what does it cost is more than a list lookup, duveka Price Calculation makes that answer reliable.

power on your business.
