

DUVEKA.MODULE

Quality management as a working part of Business Central.

duveka Quality Check delivers a complete quality management system inside Microsoft Dynamics 365 Business Central. Standardised templates, version control, traceable inspections and full audit readiness, all without writing a single line of code.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Quality management as a working part of Business Central.

duveka Quality Check delivers a complete quality management system inside Microsoft Dynamics 365 Business Central. Standardised templates, version control, traceable inspections and full audit readiness, all without writing a single line of code.

Reusable templates instead of one off checklists.

Quality processes work when they are repeatable. duveka Quality Check lets your team build reusable, version controlled inspection templates that apply to incoming goods or production. Custom check fields can be added in minutes by your key users, no AL development required. Once a template is approved, every inspection across the company runs against the same definition.

Inspections directly from purchase and production orders.

Quality is not a separate world. duveka Quality Check triggers inspections from purchase orders for incoming goods and from production orders for in process or final checks. If a required inspection is missing, posting can be blocked automatically, so finance only ever bills what was actually verified. Who checked it, when, and with what result is recorded for every inspection.

Full traceability and ready for audits.

Auditors and certification bodies expect proof, not promises. duveka Quality Check writes a complete trail across templates, inspections and exceptions. Combined with duveka DMS, drawings, certificates and photos sit alongside the inspection record, so any audit can be answered from inside Business Central.

What duveka Quality Check standardises.

duveka Quality Check turns scattered quality routines into a single, traceable system inside the ERP.

- o Reusable, version controlled check templates
- o Custom fields without AL coding
- o Inspections from purchase and production orders
- o Automatic posting block for missing required checks
- o Full traceability and DMS integration for evidence

Who runs duveka Quality Check.

Manufacturing companies with regular incoming goods or in process inspections. Trading companies that have to verify supplier quality at goods receipt. Organisations with ISO 9001 or industry specific certifications who need a system instead of binders. duveka Quality Check brings their quality reality into Business Central.

power on your business.
