

DUVEKA.MODULE

Framework agreements for 3PL, consignment and customer pools.

duveka Framework Agreement extends Microsoft Dynamics 365 Business Central with the agreements, billing and reporting third party logistics, consignment warehouses and packaging pool operators actually need.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Framework agreements for 3PL, consignment and customer pools.

duveka Framework Agreement extends Microsoft Dynamics 365 Business Central with the agreements, billing and reporting third party logistics, consignment warehouses and packaging pool operators actually need.

Auto job posting from your warehouse documents.

Every receipt, shipment and transfer in your warehouse is a billable event in a 3PL operation. duveka Framework Agreement creates project journal lines automatically when warehouse documents are posted, so the customer's running tab is always up to date and your billing reflects the work that actually happened.

Handling and storage cost done properly.

Standard Business Central does not understand handling fees per package, storage cost per cubic metre or free days before billing kicks in. duveka Framework Agreement does. Handling and storage cost are recorded per packaging good, package, container or customer item, and time based storage cost includes free day logic and proper period delimitation.

Labels, overviews and pool transparency.

On the operations side, the module includes template based label printing for stored goods and an aggregated overview of stored items including handling and storage detail. Customers running pools with you finally see one consistent picture of what is stored, what was billed and what is still pending.

What duveka Framework Agreement covers.

duveka Framework Agreement is the contract and billing layer for businesses that store, handle or move goods on behalf of others.

- o Automatic project journal lines from warehouse postings
- o Per movement handling cost and per period storage cost
- o Free day logic and clean period delimitation
- o Template based label printing for goods in pool
- o Aggregated goods overview with handling and storage details

Who relies on it.

Third party logistics providers running multiple customers in the same warehouse. Consignment operators with goods owned by suppliers or customers. Container and packaging pool operators in the timber, building materials and packaging trade. Anyone billing for handling and storage who is currently doing it in spreadsheets is the right candidate.

power on your business.
