

DUVEKA.MODULE

Direct integration with Weinig and Reinhard machinery.

duveka Weinig and Reinhard connects Microsoft Dynamics 365 Business Central with cutting and processing machinery from Weinig and Reinhard. Production data flows directly between ERP and machine, no manual transfer.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

Direct integration with Weinig and Reinhard machinery.

duveka Weinig and Reinhard connects Microsoft Dynamics 365 Business Central with cutting and processing machinery from Weinig and Reinhard. Production data flows directly between ERP and machine, no manual transfer.

Cutting orders straight from Business Central.

If your production runs on Weinig or Reinhard equipment, the question is how the cutting list gets to the machine. duveka Weinig and Reinhard generates and transmits machine ready instructions directly from Business Central production orders, so the operator at the machine starts with the right data and not a printed sheet that has to be retyped.

Confirmations back into the ERP.

Production posting only works if confirmations come back. The integration captures actual results from the machinery and writes them back into Business Central. Quantities, scrap and produced output land on the production order, the inventory is updated and your costing reflects what really happened on the floor.

Built for sawmills and timber processors.

Weinig and Reinhard equipment is core kit in the timber and woodworking world. duveka Weinig and Reinhard is the bridge between that hardware reality and a modern ERP. Combined with duveka Timber, the entire flow from log to finished cut runs on one consistent dataset.

What the integration removes.

duveka Weinig and Reinhard takes a stack of manual data transfer steps and replaces them with one automated flow.

- o Machine ready cutting and processing instructions
- o Confirmations from machinery back to production orders
- o Quantity, scrap and output reflected in inventory
- o Native pairing with duveka Timber and duveka MDE
- o No retyping between ERP and machine

Who runs it.

Sawmills and timber processors with Weinig or Reinhard equipment in production. Companies that already use Business Central for finance and orders and want their production floor to feed the same dataset. duveka Weinig and Reinhard closes the loop between the office and the saw.

power on your business.
