# Zebra ZPL labels, designed and printed from Business Central.

duveka Zebra puts professional Zebra ZPL label design and printing directly into Microsoft Dynamics 365 Business Central. No external label software, no middleware, just your ERP and your printer.

Microsoft Dynamics 365 Business Central - duveka GmbH - May 2026

# Zebra ZPL labels, designed and printed from Business Central.

duveka Zebra puts professional Zebra ZPL label design and printing directly into Microsoft Dynamics 365 Business Central. No external label software, no middleware, just your ERP and your printer.

---

## Design once, reuse everywhere ZPL is needed.

Logistics, manufacturing and trade environments use Zebra ZPL labels for shipments, pallets, items, returns and transfers. duveka Zebra adds graphical label definition with text, barcodes, boxes and coordinates, plus dynamic content via variables. A single template can drive labels across sales orders, blanket orders, transfer orders and special processes like serial or lot tracking.

## Powerful calculations and dynamic data binding.

Real labels are not static. They sum, lookup, format and adapt to the document they belong to. duveka Zebra includes a calculation engine for lookups, sums and conditional logic, so labels show the right data for the right context without manual intervention. Customer specific text, internal codes and shipment specific values are bound automatically.

## Direct integration into the standard workflow.

Labels are triggered from the documents your team already uses. Sales orders, shipments, returns, transfer orders, blanket orders and more all support label printing through duveka Zebra. The integration is native, the printers are managed centrally, and the warehouse stops chasing labels through external software.

---

## What duveka Zebra removes from your stack.

Most companies running labels alongside Business Central rely on Bartender, NiceLabel or homegrown print scripts. duveka Zebra replaces all of that with one supported, native module.

- o Graphical ZPL label design with text, barcodes and boxes
- o Dynamic content via variables and calculation engine
- o Lookups, sums and conditional logic in label data
- o Direct integration with sales, shipments, transfers and blanket orders
- o No third party label software required

## Where the impact is biggest.

High volume warehouses, packaging operations and logistics service providers. Manufacturers that print thousands of labels per day across multiple printer locations. Companies running serial or lot specific labels for traceability. duveka Zebra brings all of that into one configurable, ERP native solution.
